Niraj Patil

Student at KJ Somaiya College of Engineering.

I am an enthusiastic and creative student currently in my third year pursuing B.Tech. I have an interest towards data science and am currently looking for internship in that domain. I can see a situation from multiple perspectives, which qualifies me to complete my work even under difficult circumstances. I believe that my ability to see all sides of an issue will make me a great asset to the organization.

EDUCATION

B.Tech in Electronics and Telecommunication
KJ Somaiya College of Engineering

08/2020 - Present   *Mumbai, India*

WORK EXPERIENCE

Member of Organizing Committee
Students' Council of KJSCE

11/2021 - 07/2022   *Mumbai, India*

Students' Council is a student organization of the college that is responsible to organize college festivals.

Achievements/Tasks

- Worked on the **marketing team** and also handled **logistics** for major fests.
- Developed and maintained courteous and effective working relationships.
- Developed **good interpersonal skills.**
- Interacted with several working professionals in marketing and service sector.
- Created and managed spreadsheets using **Microsoft Excel.**

Tech Head
ISTE KJSCE

10/2022 - 04/2022   *Mumbai, India*

ISTE is an organization that works towards embarking technical knowledge and educate them on several technologies.

Achievements/Tasks

- As a Tech Head I am responsible to motivate, monitor and manage the tech team of the council.
- Together with my team we hunt for information regarding different kinds of technologies and their applications, uses and relevance. Then later on we dig down in that field and then through our social media activities share that information with the public.
- We also organize webinars, seminars and workshops for different types of technologies and topics of interests.

SKILLS

Flutter development   HTML   Data Science

Python   C++

PERSONAL PROJECTS

Weatherly - A Weather App
- Weatherly is a Flutter based weather app that can tell live weather conditions of 5 major Indian cities using an API for live data. For the backend part, firebase has been used to store the username and their passwords securely. The UI has been implemented on flutter.
